

KS-1 TOYOTA

Smart Key Simulator

KS-1 is a 5 in 1 simulation card which can eliminate the need to disassemble the smart box and other modules. As long as the original car data is read from the OBD to generate the simulation card, the ignition switch can be turned on to realize the function of clearing and adding the smart key.

Features

- **For Toyota / Lexus all key lost**

Read original car data from OBD to generate simulation key

- **Wide range of models**

Support Toyota 94/D4, 98, 39,88/A8/A9 type

- **Can be reused**

Turn off the power or remove the battery to restore the initial state.

Specifications

Battery	CR2025 3V 165mAh
Standby Current	Standby current $\leq 2 \mu A$
Reading And Writing Frequency	125kHz
Status Indicator Lamp	1pc (Mode: turn on and light up for 2s and then extinguish;Flicker, flash, 0.5s/ time when writing or reading)
Update	The simulation card firmware can be updated with KC100
Working Temperature	-20°C~60°C
Storage Temperature	-20°C~70°C
Structure Size	66mm*40mm*12mm
